

organisation. The officers and committees of the XII International Congress of Dermatology are to be congratulated on their valiant efforts in dealing so effectively with the large number of members who almost overflowed the available accommodation. Another problem at such meetings is the very varied standards of the papers presented. Careful selection should ensure that a minimum standard is achieved and that papers containing new material are not excluded because of lack of space on the programme. On the other hand, papers containing no new material which are given for prestige reasons only, should

be reduced to a minimum or eliminated altogether.

The World Forum on Syphilis and the International Congress of Dermatology brought together experts and specialists from all over the world. Personal exchanges of ideas and information and the formation of new friendships are amongst the most important results of such gatherings. The meetings in Washington have contributed significantly to the understanding of many different medical problems, and have served to bring doctors of all nationalities closer together and to raise the standards of medicine throughout the world.

REVISED SUBSCRIPTION RATES

The attention of subscribers is drawn to the notice on the back cover regarding increased prices for B.M.A. periodicals. The rate to members of the M.S.S.V.D. will not be affected as their subscription to the Society includes the cost of the *British Journal of Venereal Diseases*.

INDEX TO VOLUME XXXVIII, 1962

Authors and subjects of articles in the body of the Journal are indexed together. There is a separate index to subjects of articles abstracted, and another to authors of articles abstracted.

- ABOB in non-gonococcal urethritis, 69
Achromycin in non-gonococcal urethritis, 157
Actinospectacin: *see* Trobicin
